

Forecast-to-Plan Feasibility Gate

Forecast accuracy is diagnostic; deployment approval depends on feasible planning signals.

Step 1

Candidate forecasts and policies

Build deployable planning options

Step 2

Forecast-to-plan conversion

Translate forecasts into executable signals

Step 3

Feasibility scoring gate

Check whether plans can be absorbed

Step 4

Deployment decision and validation

Select rollout policy and validate robustness

Purpose: prevent a WAPE-improving forecast from bypassing operational feasibility review.
